

Manage Your Business

Tracking and Reporting – Granite Rock Reports

With Granite's* on-line reporting package, Rock Reports, delivers inventory management features at your fingertips.

Network Integration Services

Granite's skilled, certified engineers and project management team can develop a diverse solution from the initial stages to integrating new functionality into your current technology environment or installing a completely new communications strategy. Granite delivers economical, dynamic, flexible and secure network options enabling you to optimize efficiencies and increase productivity.

Complete Coverage

Granite services customers throughout the U.S. and Canada providing flexibility for all your technology requirements. We provide a thorough solution without geographical limitations.

One Source / One Bill

Granite understands the challenges presented by working with multiple providers and invoices. Granite can address those challenges for you by assigning a single point of contact who can consolidate all services into one invoice. This enables you to reduce paperwork, giving you better control over your communications.

Partnerships and Networks

Granite consolidates and manages vendor relationships so you don't have to. Granite's effective network and strategic partnerships can create efficiencies that will allow you to concentrate your bottom line.

Granite can simplify your communications inventory management with Granite Rock Reports.

Displays voice line inventory by location

Granite is dedicated to empowering our clients to understand and control their communications services. Both our billing and reporting is based on a policy of clarity and transparency displaying all of your data and voice connections.
